RESEARCH:

Rapini RP, **Clark JW**: A double-blind, randomized, placebo controlled, multicenter, parallel group evaluation of the efficacy and safety of sertaconazole 2% cream on patients with interdigital tinea pedis.

Butler DF, **Clark, JW**: A 26-week study with a 6-week randomized multicenter, double-blind, vehicle-controlled, parallel-group phase followed by a 20-week, open-label phase to study the safety and efficacy of 1% SDZ ASM 981 cream in pediatric subjects with atopic dermatitis.

- 2004 Phase IV Open-label, observational cohort study – Assessment and Tracking of long-term alefacept safety
- 2005 Phase IV 12 week open-label, observation study to evaluate adapalene gel 0.1% as part of a Combination therapy regimen in moderate to moderately severe acne
- 2006 Phase IV Open-label 4 week trial to evaluate patient satisfaction with clobetasol propionate 0.05% when used as monotherapy or as add-on therapy for the treatment of moderate to severe plaque psoriasis.
- 2006 Phase III Multi-Center, randomized, double-blind, parallel-group study to demonstrate the efficacy and safety of adapalene/benzoyl peroxide topical gel compared with adapalene topical gel, 0.1%; benzoyl topical gel, 2.5% and topical gel vehicle in subjects with acne vulgaris.
- 2007 Phase IV Observational Post-Marketing Safety Surveillance Registry of etanercept for the treatment of Psoriasis
- 2007 Phase III randomized, double-blind, multiple-site, placebo controlled, parallel design, clinical study to evaluate the bioequivalence of generic Adapalene Gel 0.1% compared to brand adapalene 0.1% in patients with Acne Vulgaris
